

Do you have a child with sickle cell disease under 5 years of age?

Researchers at the Kennedy Krieger Institute and the Johns Hopkins Hospital are looking for volunteers to participate in a research study on neurodevelopment in young children with sickle cell disease.

To participate in the study, your child must:

- Be under 5 years of age
- Have a diagnosis of sickle cell disease
- Be willing to have a neurodevelopmental evaluation

This study involves 3 study visits involving:

- History and neurological examination
- Neuropsychological testing
- MRI of the brain
- Blood sample completed at one of the visits above

After the 3 visits above, this study may require annual visits until age 5 years including neurological exam and blood sample collection. At their final visit at age 5 years, this study will require neurological examination, neuropsychological testing, MRI of the brain, and blood sample collection.

Compensation provided
