

G.I. Wanna Talk About Autism

Gastrointestinal (GI) symptoms are common and can be disabling. However, there is very little research on GI symptoms in the autistic adult population. This study aims to gain an understanding of the experiences, needs, and priorities of autistic adults as they pertain to GI health and related issues, such as diet, quality of life, and experience with healthcare access.

Recruitment Criteria

- ✓ 18 years or older
- ✓ Identifies as autistic
- ✓ History of GI symptoms or currently experiencing GI symptoms
- ✓ Lives in USA and
- ✓ Speaks English

Are You an Autistic Adult (18years+) with a history of GI symptoms?

If you answered **YES**, then you may be eligible to participate in a Research Study to examine gastrointestinal (GI) symptoms in autistic adults. *Parents or caregivers may serve as proxy respondents.*

Visit the study website at **GIWannaTalkAboutAutism.com** to fill out the Pre-Enrollment Screening Survey. Selected individuals will participate in one or two interviews (45 – 90 minutes each). Participants will be paid for each completed interview.

This project is supported by the Health Resources and Services Administration (HRSA) of the US Department of Health and Human Services (HHS) under award UT2MC39440, the Autism Intervention Research Network on Physical Health. The information, content, and/or conclusions are those of the author and should not be construed as the official position of, nor should any endorsements be inferred by HRSA, HHS, or the US Government.
