

Research Volunteers

Healthy people ages 3-85
are needed to participate in a
Motion Analysis research study at the Kennedy Krieger Institute

Participation involves having small sticky markers placed on your arms and legs so a computer can detect your movement as you stand and balance, walk, and reach with your arms while sitting at our KinArm robot, and walk on a treadmill. We may also ask you to play a video game in the lab, or at home. In addition, we might quickly test your senses and reflexes. We might also ask you to lie down in an MRI machine so we can take pictures of your brain while you look at pictures, move your arm, or squeeze a device for us. There are no medical benefits or significant risks for you for joining this research study.

The research study can take 1-5 hours (with multiple visits possible).

Amy J. Bastian, PhD, Principal Investigator
Kennedy Krieger Institute
Application #: IRB00276939

**For further information, or if interested in participating, please contact
the Motion Analysis Lab: 443-923-2716 or email:**
